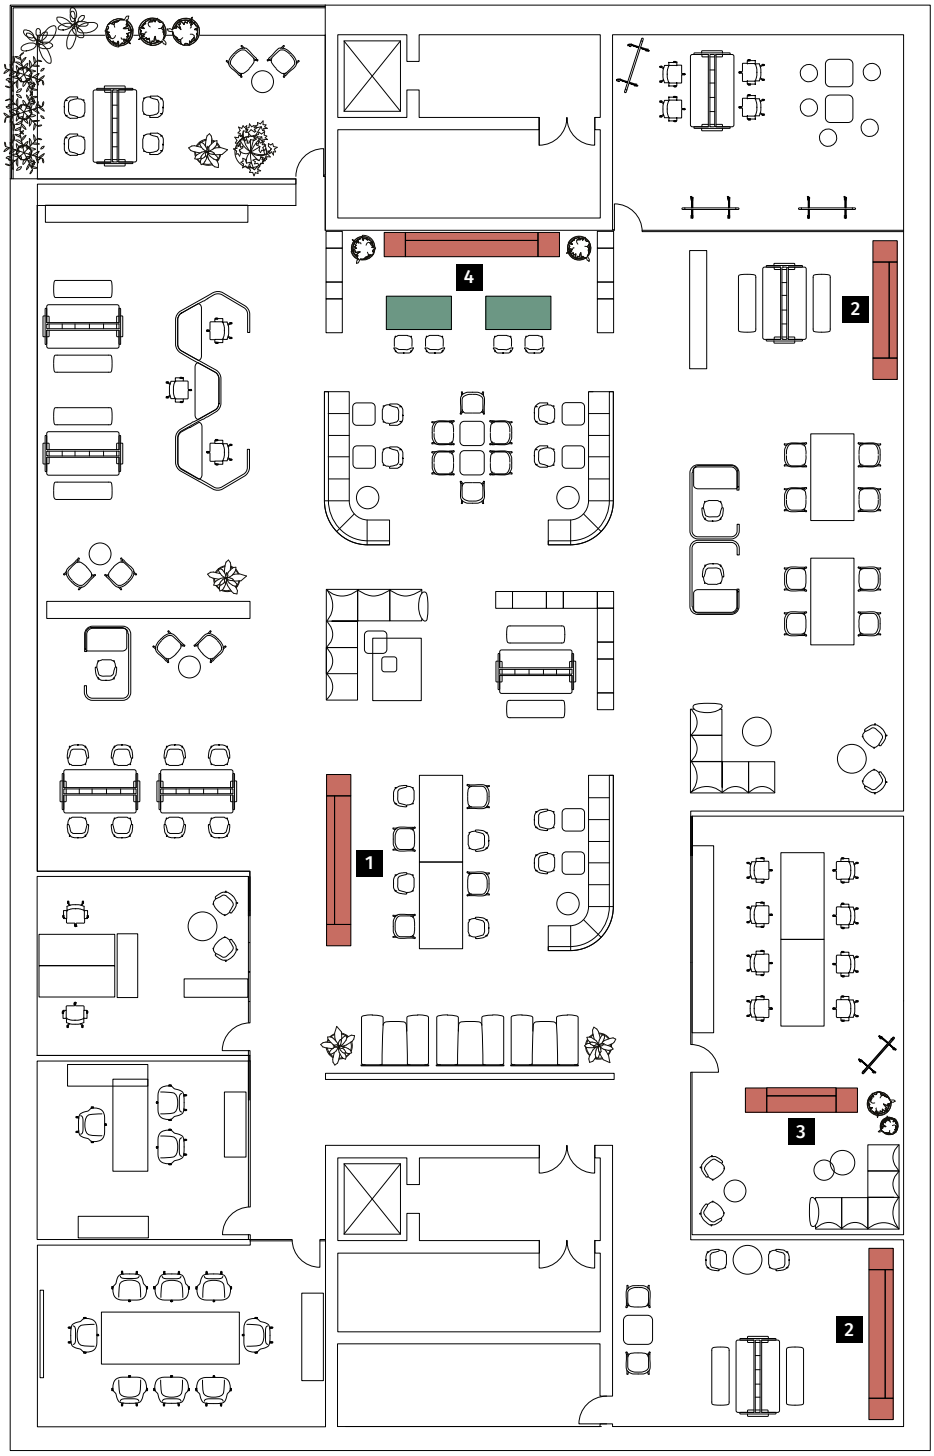
se:café bar

A spot for good coffee, hospitality and small talk

se:café bar brings the essence of a café into the office and creates a central location for good coffee, hospitality and spontaneous conversations. It is more than just a tea kitchen: as a versatile, configurable supply module, se:café bar offers everything that is needed in a modern working environment – from the provision of hot and cold drinks to storage space and options for heating up food. With its homely design, it blends harmoniously into the Sedus Smart Café concept and offers an inviting atmosphere that promotes communication and cooperation. Thanks to its modular design, se:café bar can be used flexibly as an island, wall module or room divider and thus adapts to a wide variety of office structures. Whether in work cafés, intermediate areas or lounge areas – se:café bar becomes the centre of social interaction and creates spaces where employees can feel comfortable and network. It connects functionality with a feel-good character and turns the office into a meeting place.



Application areas

1. Work Café (the heart of the Sedus Smart Café)
2. Hubs & intermediate areas
3. Lounge & reception areas (space-saving refreshment module for hot and cold drinks)
4. Canteen, bistro & cafeteria (alternatives to the conventional tea kitchen)

se:café bar

se:café bar wall module and room divider

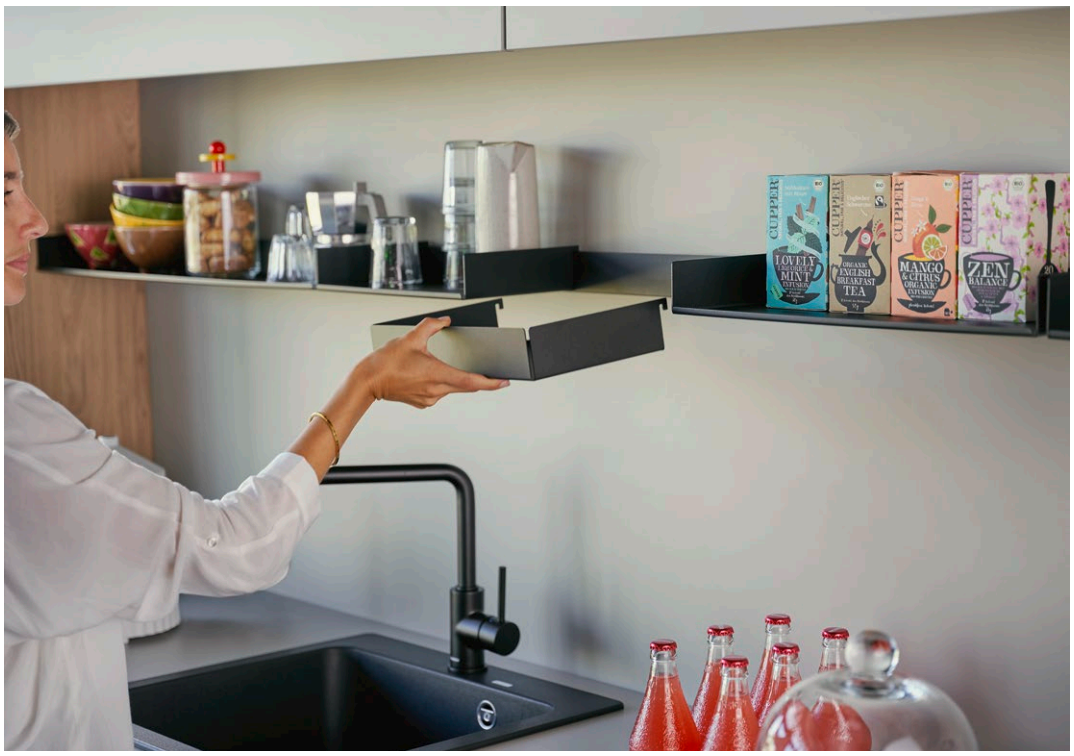
The se:café bar modules provide optimal catering facilities for the office. The wall module with optional tall cabinets is particularly suitable for classic room layouts, while the free-standing room divider can become the focal point of a work café.

se:café bar island

The se:café bar island modules are free-standing, configurable supply units that can be flexibly integrated and create a centrepiece for informal meetings. They promote communication and hospitality and create an inviting environment.

se:café bar wall module and room divider

Optional free-standing catering module with functional rails



The se:café bar wall module is not just a refreshment station, it's also a versatile design element. It combines compact functionality with a homely design that fits perfectly into office environments. Optional outfitting with tall cabinets on the left or right, or on both sides, offers additional storage space and the option of integrating a larger refrigerator or microwave within easy reach at eye level. Used free-standing as a room divider, se:café bar is ideal for zoning in modern office environments. The front section is fitted with service features, e.g. beverage provision, whereas the rear section offers a homely design or optional workshop tools to support creative work-flows.

Advantages

- The wall module with optional tall cabinets is particularly suitable for classic room layouts, while the free-standing room divider can become the focal point of a work café.
- Thanks to their timeless design and diverse positioning options, the modules blend harmoniously into all room layouts.

Features

- The self-supporting design makes placement in front of a wall (no connection to the wall is required) or free-standing in one space, possible.
- The solid frame ensures stability while defining the design: through it, a changeable and usable niche with a homely character is created above the worktop.
- The niche back panel is equipped with integrated functional strips for hanging up writing tablets and accessories, allowing the niche to be flexibly adaptable at a later date. As an option, top units can be planned with a functional rail below and, with free-standing modules, the functional rails can also be used on the back.
- The area beneath the work surface is fitted with base units and standard household built-in appliances (Refrigerator/dishwasher). Storage units and appliances are opened via an integrated recessed handle. Behind the base units there is an installation area for power, water and waste water connections.

Options/accessories

- Available in three widths: with two, three or four base cabinets.
- The functional rails can be fitted with dimmable LED light profiles: the indirect, glare-free lighting emphasises the homely character of the modules and provides sufficient light in the niche and on the work surface.
- A sink with tap can be integrated into the worktop.
- The functional strips can be equipped with writing tablets, shelves or a kitchen roll holder. In the case of free-standing modules, the functional strips can also be used on the rear side, for which a whiteboard holder or planters are also available. A monitor support can also be mounted on the rear.
- Splash-proof sockets can be fitted into the niche back panel.

se:café bar island

Catering module as a free-standing island

The se:café bar island modules are free-standing supply units that can be flexibly integrated into the room and thus form the centrepiece for informal meetings and spontaneous exchange. The understated design looks impressive, offering the option of an integrated sink, dishwasher or a cooling unit. With individually configurable dimensions and feature options, the island modules are ideal for open-plan offices where communication and hospitality take centre stage, creating a relaxed, inviting atmosphere.

Advantages

- The island stands freely in the room and is accessible from all sides. In combination with a wall module or room divider, this creates an inviting meeting point in the office, where the island modules also provide storage space and, if desired, further seating.
- Thanks to their timeless design and diverse positioning options, the modules blend harmoniously into all room layouts.

Features

- The island modules can be expanded to include a bar table, which rests on one side of the island module and is supported on the other side by a 50 mm strong panel. It can be positioned at the side as an extension of the island or at the back at a 90° angle, creating a generous standing area (high desk height: 1050 mm) or seating for four to six people.
- With an island module with seating at the back, the side panels and cover tops are recessed (depth: 1100 mm), creating an area at the back with two to four seats in a raised seating position (table height: 925 mm).
- The island module's worktop provides space for short-term storage of crockery and may also accommodate a coffee machine or water dispenser.

Options/accessories

- The island modules are available in three widths: with two, three or four bottom cabinets. They can be planned with an attached table, with a seating area at the back or without a seating area.
- The extension table is available in two lengths (1525 and 2125 mm).
- A sink with tap can be integrated into the worktop.
- The area underneath the work surface can be fitted with a dishwasher or a cooling unit.
- Frames, fronts, niche back panels, carcasses, side panels and plinths can be configured independently of each other. The melamine collections (Wood Selection, Architecture Line, Colour Harmony) are available as surfaces.

More about se:café bar island

Website

sedustainable

se:café bar is sustainable.

Social responsibility

- se:café bar is the place to go for spontaneous meetings.
- The bar enables exchange in an informal environment.

Economy

- se:café bar has been specially designed for the office and focuses on the functions that are needed.

Ecology

- Thanks to the diverse modules and positioning options, the bar fits into most project rooms.

Sedus pursues a holistic approach to sustainability based on the three pillars of social, ecology and economy. The goal of becoming CO_2-neutral at its administrative and production sites by 2025 is actively supported through the development of innovative products and efficient production methods. Sedus is also committed to social projects, education and health through two foundations to which the company is majority-owned, thus making a positive contribution to society. With the “Sedustainable” initiative, Sedus designs holistic workplace solutions that both protect the planet and improve the quality of life of its employees. We really care.

We really care
