

PRODUCT FACTSHEET

se:living

Sofa for cosy offices

With its comfortable upholstery, se:living radiates creativity and lightness in lounge and meeting zones, in hubs and collaboration areas. Whether as a single sofa, a corner unit or an island constellation, with storage elements, add-on or side tables – the sofa offers a wide range of options.

Design: Robin Rizzini

↓ [Download Dxf-file](#)

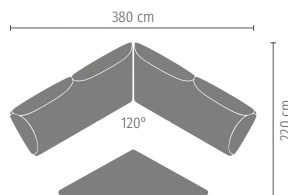

As a classic arrangement: sofa and armchair as a setting in combination with side tables

↓ [Download Dwg-file](#)

↓ [Download Dxf-file](#)

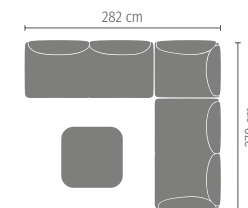

Innovative conference areas: with the diagonal sofa elements, meeting areas can be arranged into an inviting seating configuration

↓ [Download Dwg-file](#)

↓ [Download Dxf-file](#)

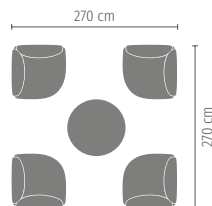

Individual solution: a corner configuration with different seat depths as well as with an open end on one side and an armrest on the other

↓ [Download Dwg-file](#)

↓ [Download Dxf-file](#)

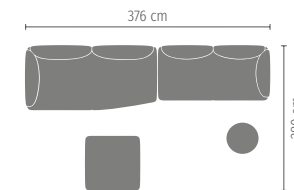

Free arrangement: a combination of armchairs and table as a central element creates a light and airy look

↓ [Download Dwg-file](#)

↓ [Download Dxf-file](#)

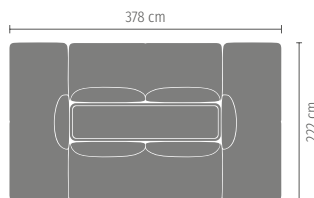

According to preference: thanks to different seat depths, everyone can choose their preferred side

Construction and upholstery structure:
upholstered elements, stools,
armchairs (square)

The upholstery structure consists of an 80-mm-high innerspring that sits loosely on the base frame. For sound insulation, a layer of fleece is loosely laid between the base frame, which has holes for ventilation, and the innerspring. Another layer of fleece lies loosely on the innerspring. The full-surface upholstery structure in sandwich construction is made of two layers which are contour-cut.

Backrest and armrest upholstery: The backrest and armrests are fitted into the frame using two black powder-coated steel tubes (29-mm diameter) and screwed into place from below.

It is possible to remove and replace the armrests at a later date. The backrest and armrests have a wooden support made of plywood. The full-surface upholstery structure in sandwich construction made of two layers is contour-cut. A 100-gram polyester fleece wadding is sewn under the cover.

Construction and upholstery structure:
Armchairs (round)

The upholstery structure consists of straps that are stretched crosswise and firmly connected to the wood. The full-surface upholstery structure in sandwich construction made of two layers is contour-cut.

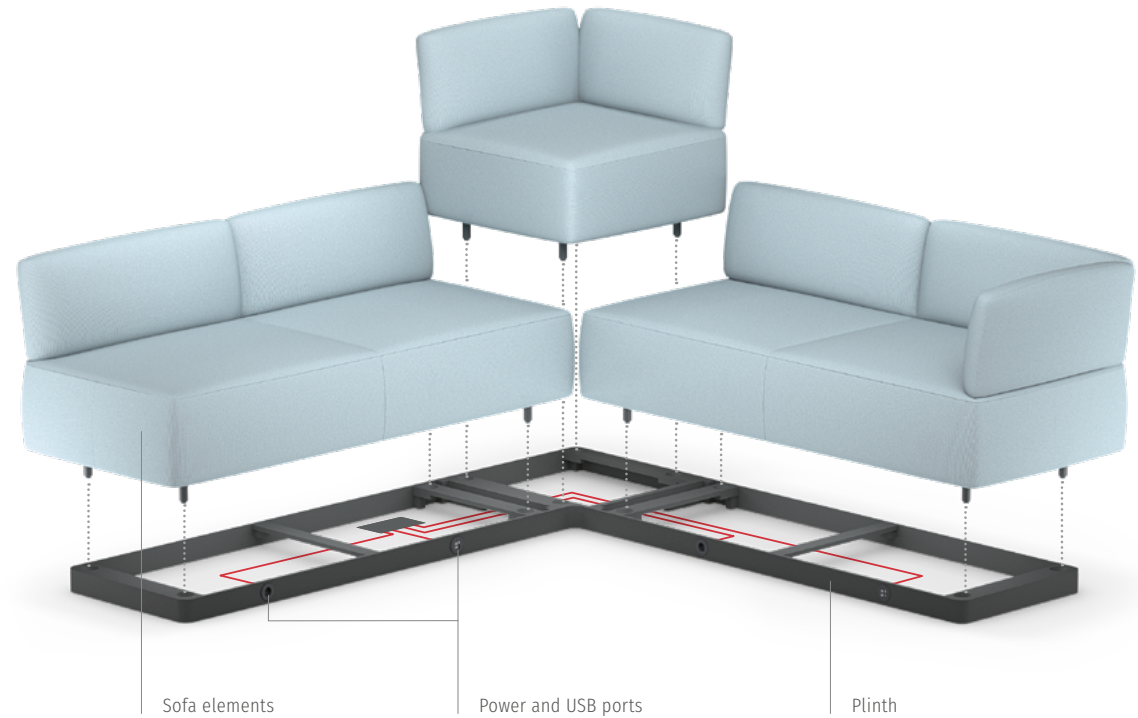

Information on used materials and recyclability can be found in the [EPI – Environmental Product Information \(pdf\)](#)

Easy assembly of the sofa as well as easy fitting of the wiring. Cables and wires are stowed in the plinth and integrated discreetly in the floor in combination with a floor box

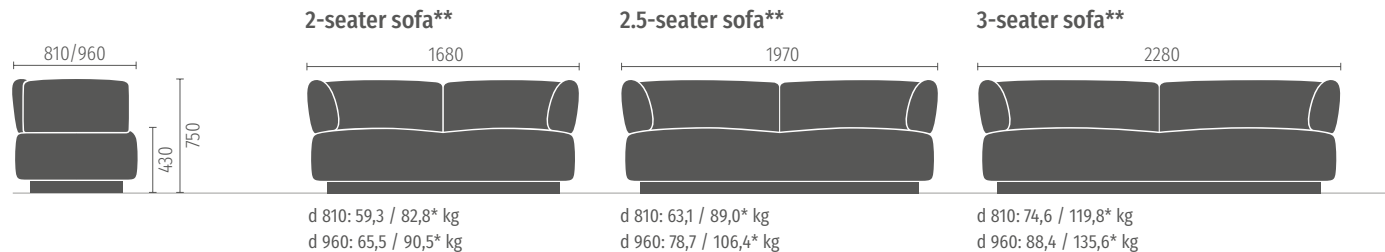

1. In the plinth, the power and USB ports can be placed centrally under the seat for easy access
2. The storage element is available as a starting, middle or end element and can be optionally equipped with a power supply
